

Eva-Maria Schön was born in 1985 in Tirschenreuth (Germany). In 2005 she obtained the Abitur (Stiftlandgymnasium Tirschenreuth). She received her BSc (2008, "Einsatz von Azabis(oxazolinen) in der asymmetrischen Katalyse" in the group of Prof. Reiser) and her MSc (2010, "Synthesis, characterization and properties tuning of gels made by low-molecular-weight compounds" in the group of Dr. Díaz-Díaz) in Chemistry at the University of Regensburg, Germany. The research field of her PhD covers the synthesis, characterization and applications of supramolecular stimuli-responsive gels, which are derived from low-molecular weight (LMW) gelators. She is especially interested in working with gel-based materials containing metal ions and the preparation of new multicomponent organogelator liquid systems for multicomponent LMW gels.

Besides working in the lab she loves going to the cinema, travelling and cooking.
