

Jürgen Walter Bachl was born in Furth im Wald (Oberpfalz, Germany) and his current residences are located in Regensburg and Rimbach. He was visiting the Benedikt Stattler Gymnasium in Bad Kötzing where he reached his Abitur in 2005. In 2008 he obtained his BSc in Chemistry at the University of Regensburg with the Thesis entitled: "Entwicklung eines lipophilen molekularen Schalters zum Einbau in Liposome". In 2010 he received his MSc degree in Chemistry with the Thesis entitled: "Synthesis, characterization and evaluation of supramolecular gels as nanoreactors in photochemical transformations". His current PhD research activities mainly deal with the investigation of dye-modified peptide materials for practical applications such as drug delivery, catalysis or nanoparticle synthesis. Furthermore, his scientific interests cover the fields of photocatalysis in gel-based materials, study of new polymer gels and development of supramolecular multistimuli soft materials.

Outside the lab his hobbies are fishing, darts, sports in general and food.
