

Daniela Guzmán-Angel was born in Santiago (Chile) in 1989. She obtained a BSc. degree in Chemistry in 2014 from Pontifical Catholic University of Chile under the supervision of Professor Alejandro Toro-Labbé with a thesis entitled: "Theoretical study of proton transfer in formamide molecule and the role of water molecule in the reaction". Currently, she is working in her doctoral project at the same university entitled "Porous materials for separation, storage and conversion of greenhouse gases" and she is starting her third year of studies.
