

César Saldías was born in Santiago, Chile. He obtained his PhD in 2012 from the Pontifical Catholic University of Chile under the supervision of Professor Angel Leiva. Currently, he is working on his Fondecyt postdoctoral project sponsored by Professor Deodato Radic. The postdoctoral project is focused on the formation of dendrimeric nanoaggregates to be used as drug nanocarriers and nanoreactors in the synthesis of noble metal nanoparticles. His current research interests also include the development and functionalization of nanoaggregates for efficient photocatalytic hydrogen production.
